

Subject index

A

- accelerated failure-time model 16, 112, 113
- advanced prostate cancer data 311
- age as the time scale 18, 32, 44, 211
- age-specific reference interval 290
- AIC (Akaike information criterion) 18, 76, 105, 110, 131, 252, 283, 287
- Andersen–Gill (AG) model 296
- Aranda-Ordaz link function 119, 130, 178

B

- baseline hazard 2, 3, 6, 47, 61, 64, 67, 71, 86, 106, 127, 298, 302
- Bayesian models 304
- BIC (Bayes information criterion) 18, 76, 105, 110, 131, 252
- bladder cancer data 298
- bootstrap 19

C

- calibration 160
- cause-specific hazard rate 310, 313
- cause-specific survival 228
- CD4 lymphocyte data 285
- choice of scale 130
- collapsing the data 57
- competing risks 310, 322
- conditional event probability 54
- confidence interval 224
- continuous variable, 267
 - time-dependent effects of 205
- Cox model 2, 12, 47
- Cox, Sir David 1
- crude probability of death 311, 323
- cumulative distribution function 18

- cumulative hazard function 17, 92, 99
- cumulative incidence function 310, 312, 322

D

- dataset, large 56, 111
- delayed entry 18, 44
- delta method 19, 224
- density function 284, 288
- discrimination 149, 152, 160

E

- England and Wales breast cancer data 15, 39, 231, 248, 323
- estimation 16, 120
- excess mortality rate 228, 253
- excess mortality-rate ratio 242, 270
- explained variation 149, 296
- exponential distribution 48, 92

F

- `fracpoly` 127
- fractional polynomials, 81, 127, 287
 - multivariable 294
- frailty models 296

G

- gamma distribution 15
- generalized linear modeling (GLM) 47
- goodness of fit 147, 293

H

- Harrell's C index 152
- hazard difference 197
- hazard function, 3, 17, 38, 40, 44, 78
 - estimation of 100
- piecewise 65

- hazard function, *continued*
 Weibull 95
 wiggly 5, 39
- hazard rate 73, 196
- hazard ratio, 2, 3, 12, 177, 197
 time-dependent 13
- K**
 Kaplan–Meier curve 8, 38
 kernel, Epanechnikov 39
 kidney cancer data 274
 knots 67
 boundary 70
 number of 74, 110
 position 78, 108
 sensitivity analysis 122, 260
- L**
 left-truncation 31
 life table 233
 likelihood function 18, 49, 120
 loglogistic model, 112
 generalization of 113
- M**
 marginal model 296
 martingale residuals 147
 median survival time 38
 mfp 127, 132
 model selection, .. 18, 89, 121, 129, 259
 spline 108
 multiple events 296
 multivariable fractional polynomials...
 220
 multivariable model 127
- N**
 net probability of death 311
 net survival 230
 nomogram 127
 nonlinearity 149
- nonproportional excess hazards 243
 nonproportional hazards 12, 54
 number needed to treat 273
- O**
 odds ratio 111
 orchectomy data 42, 211
 orthogonalization 98
 out-of-sample estimation 104
 outcome-dependent model 287
 overall survival 230
 overfitting 19
- P**
 parameterization
 loglogistic and PO(1) models 113
 Weibull and PH(1) models 104
 parametric model 13, 14
 period analysis 31, 317
 piecewise exponential model 50, 53
 piecewise model 235
 Poisson distribution 305
 Poisson model 47–49, 54, 235
 equivalence to Cox model 61
 time-dependent effects in 179
 predict 19
 prediction,
 out of sample 14, 153
 predictnl 13, 19
 Prentice, Williams, and Peterson
 (PWP) model 296
 prior distributions 307
 probit function 285
 probit model, 114, 117, 283, 287
 generalization of 115
 prognostic index 127
 prognostic model,
 developing and reporting 126
 proportional cumulative excess
 hazards 247
 proportional hazards 2, 11, 47
 proportional-hazards assumption ... 10,
 172

proportional odds model 112
proportionality assumption 224
prostate cancer data 294

R

random effects in Bayesian
Royston–Parmar models .. 310
relative survival, 13, 320, 322
likelihood for 247
Royston–Parmar models for ... 246
restricted cubic splines ... 118, 184, 241
risk difference 273
Rotterdam breast cancer data .. 37, 48,
71, 86, 93, 119, 127, 283, 305
Royston–Parmar model 118, 127
distribution modeling with 283
with time-dependent effects ... 190

S

scaled Schoenfeld residuals 172
scales,
choice of 13
other 248, 250
scaling (of covariate effects) 176
selection of variables and functional
form 131
sensitivity analysis 307
spline,
basis functions 70, 97
calculation of 69
function 66, 67, 71, 97
restricted cubic 70
splitting the time scale .. 18, 47, 50, 59,
66, 173, 183, 297
stpm2 3, 16, 97, 284, 298, 313
str2d 151
stratification 203, 298
streg 14
sts 233, 234
stset 23, 37, 43, 299, 301, 319
stspli 33
stsurvimpute 161
survival analysis, requirements of 9
survival difference 198
survival distribution, centiles of 145

survival function, 17, 38, 40, 91
estimation of 79
extrapolation 153, 155
plotting adjusted 142
survival function, plotting adjusted
plotting difference 143
survival probabilities at given
covariate values 138
survival probabilities for individuals ...
..... 134
survival probabilities in groups 140
survival times, visualization of 161

T

time intervals, number of 62
time scales, multiple 14, 218
time-dependent effect, 33,
47, 57, 167, 168, 214, 225, 253,
287, 298, 302
continuous 193
forward selection of 220
in prognostic models 219
more than one 201
time-fixed covariate 168
time-fixed effect 168
time-varying covariate 34, 168

V

validation, external 153, 157, 160
varying-coefficient model 296

W

Wei, Lin, and Weissfeld (WLW)
model 296
Weibull distribution 95
Weibull model, generalization of.... 96,
101
WinBUGS 304

Z

zeros trick in WinBUGS 305
