Subject index

A

adaptive rejection Metropolis sampling 65–66
adaptive rejection sampling 66
AIC . . . *see* Akaike information criterion
Akaike information criterion 201
autocorrelation plot 81–82

B

Bayes factor 188–204
Bayes' theorem 3, 11
Bayesian
  algorithm 9
  analysis with Mata 111–130
  analysis, series of 157–159
  calculations 2–4
  inference using Gibbs sampling 131
  information criterion 202
  lasso 237–250
Bayesians 1
  versus non-Bayesians 2
BIC . . . . . *see* Bayesian information criterion
box plot 173–174
Brooks–Gelman–Rubin plot 83–84
BUGS . . . . . *see* Bayesian inference using Gibbs sampling
burn-in 34

C

censoring 152–154
centering 44–47
chains
  discarding 81–82
  multiple 83–84
`ci` command 35
`cond()` function 30
conditional distribution 11–12, 122–123
contour plot 107
credible interval 71, 101–104
CrI . . . . . *see* credible interval
cusum plot 75–79
`cut()` function 155–156

D

deviance information criterion 202–204
DIC . . *see* deviance information criterion
distribution
  conditional . . . . . *see* conditional distribution
  gamma . . . . *see* gamma distribution
  generalized Poisson . . . . . *see* generalized Poisson distribution
  log-normal proposal . . . . . *see* log-normal proposal distribution
  marginal . . . . . *see* marginal distribution
  normal . . . . *see* normal distribution
  normal proposal . . . . . *see* normal proposal distribution
  predictive . . . . . *see* predictive distribution
  prior . . . . . *see* prior distribution
  proposal . . . . . *see* proposal distribution
drift 75–90

E

empirical probability plot 174–176

G
gamma distribution 33
generalized Poisson distribution . . 40–43
`genprop` command 30
GeoBUGS 156–157
Gibbs sampler 239–242
Gibbs sampling 53–73
`glm` command 9
GP distribution . . . . . *see* generalized Poisson distribution
`graph matrix` command 106–107
griddy sampling 60–61

H
histogram 175–177

I
`integ` command 9–10
integration 27
interval plot 83

J
Jacobian matrix 24

L
lasso . . *see* least absolute shrinkage and selection operator
least absolute shrinkage and selection operator 237–250
`logdensity` command 13–23
`logdensity()` function 115–129
log-normal proposal distribution 33
`logpost` command 13–23, 30
`logpost()` function 113–125
`logprop` command 30

M
marginal distribution 11–12
marginal posterior density plot . . . 104–106
Markov chain 27
  Monte Carlo algorithm 27
Mata code 242–243
`mata` command 111–129
`matastrict`, `set` subcommand 264
`matrix list` command 38
matrix plot 106–107
MCMC algorithm . . . . . *see* Markov chain Monte Carlo algorithm
`mcmcac` command 82
`mcmcbgr` command 84
`mcmccheck` command 165–166
`mcmccusum` command 76
`mcmcdensity` command 104–106
`mcmcgeweke` command 79
`mcmcintervals` command 83
`mcmclength` command 81
`mcmcmahal` command 85, 89
`mcmcrun` command 37–38, 88, 111–129
`mcmcsection` command 80
`mcmcstats` command 35, 100–104
`mcmctrace` command 34, 75
Metropolis algorithm 29
Metropolis–Hastings algorithm . . 27–51
MH algorithm . . . . . *see* Metropolis–Hastings algorithm
`mhslogn` command 30, 36, 88
`mhsmnorm` command 47–48
`mhsnorm` command 30
`mhstrnc` command 30, 88
missing data 152
missing values 21
`ml` command 9, 20
Monte Carlo algorithm 27

N
noninformative priors 6–7
nonstandard distribution 154–155
nonstandard priors 155
normal distribution 29
normal proposal distribution 29
numerical information 1

O
OpenBUGS 131–162
  for Linux 159
  installing 132
overrelaxation 150

P
predictive distribution 4, 169–170
prior distribution 3
selecting a 5–7
proposal distribution 27
scaling 36–37

R
random-number generator 151–152
`range` command 10
`regress` command 57
rejection sampling 63–66
residual plot 170–173
`return()` function 115–116
`rgamma()` function 97, 241
`rnormal()` function 97, 241

S
section plot 80
sem . . . . . *see* standard error of the posterior mean
`set matastrict` command 115–116
simulation 27
slice sampling 61–62
standard error of the posterior mean 36
Stata code 244
subjectivity 2
`summarize` command 20, 35
summary residual plot 177–179
`syntax` command 20

T
trace plot 34, 75–79
truncation 152–154
`twoway contour` command 107

W
WinBUGS 131
data file 135–136
reading 139–140
debugging 159–161
initial values file 136–137
installing 132–133
log file, inspect 139
WinBUGS, *continued*
model file 133–135
read results into Stata 138–139
script file 137–138
run 138
